Overview

One of the more popular features of large-diameter MegaMc® fusion machines is the hydraulic clamping that tightens the jaw clamps. Now, users can retrofit their Rolling and TracStar 412s, as well as their Rolling and TracStar 618s, with hydraulic clamping that replaces the standard manual crank clamp knobs. The retrofit kit can be installed by your local McElroy distributor and includes a manifold block that is added to the carriage and controls the two fixed jaw cylinders and two movable jaw cylinders independently. Included in the kit are two inner-upper jaws that are specific to clamping enabled machines.

Features

- Increased productivity due to not requiring manual cranking of clamp knobs
- Less time spent working with jaw operation and more time spent fusing pipe
- Quick disconnect hydraulic fittings are provided for fusing tees, ells, and tie-ins
- Retrofit kit can be installed at your local McElroy distributor

Part No.*

- A1262301 - Retrofit Kit for Rolling and TracStar 412
- A1870301 - Retrofit Kit for Rolling and TracStar 618

**These kits are compatible with any TracStar No. 412/PitBull No.412 and TracStar No. 618/PitBull No. 618 machine.*
Also compatible are the 412 and 618 Rolling machines introduced in 2003 under the model number series 1248100 & 1869100.
New 412 and 618 machines can be ordered with hydraulic clamping preinstalled.
