

Master Meter System announces the release of our new AMR software, MasterLinx Mobile Reading System.

Upgrade Today

MasterLinx Mobile Reading System (MMRS) is a web application hosted on servers at our secure data center (Peak 10) which integrates with a laptop/handheld software for data collection.

This new software brings you all the features of an AMI system without the infrastructure. You can access the system from any internet connected computer as well as load and unload reading data from anywhere an internet connection is available. No need to worry about updating software or backing up data. You'll have easy access to customer support. MasterLinx uses a stable database that can handle any size customer base from small to large, and will easily grow with your utility.

We have spent several years developing this product, drawing from our long experience with the utility industry, and most importantly, input from you, our users.

We would like to show you all the features of our new system and discuss your upgrade. Give us a call to schedule an online demonstration so you can see all the benefits of MasterLinx Mobile Reading System for yourself. We're looking forward to hearing from you!

Features & Benefits:

- Secure web based customer data
- Load and unload your laptop/handheld from anywhere anytime
- Stream meter reading data in real time with WiFi or Cellular data connection
- Track GPS device (laptop) in real time
- 3D Mapping Integration – Continuously updating map data
- Consumer Login feature for end user to view meter readings and data logs collected via the mobile reading software
- Functional work order module
- Integrated 3G Tech software
- Handheld and laptop software always up-to-date
- AMR system with every benefit of fixed network without the infrastructure
