A Better Approach.

“AVG is such a great antivirus product – plus AVG CloudCare came with a flexible content filtering feature.

We made the switch to AVG CloudCare as soon as we could.”

Lon Carriveau
Owner, LLC Corporation

Profile:

Roman Weninger, owner of 5 Corners Dodge Chrysler Jeep in Cedarburg, Wisconsin trusts his 24-computer network to LLC Corporation, an IT consulting company run by Lon Carriveau.

The Challenge:

5 Corners Dodge Chrysler Jeep was protected by another content filtering product with forced antivirus, but threats were still getting through. Some viruses caused so much damage that LLC Corporation had to wipe the computers clean to get them healthy again – which also cost money.

The Solution:

LLC Corporation was one of the first resellers to use AVG CloudCare Limited Release. They determined that it was “a better approach” for the dealership, so they made the switch to AVG CloudCare.

The Benefits:

Both Weninger and Carriveau knew right away that they had made the best decision by moving to AVG CloudCare. During the initial scan, it found "quite a number of viruses that had been missed by the previous antivirus solution."

Weninger has been impressed by the AVG CloudCare content filtering feature and the simplified reporting.

"As a business owner, I really appreciate that LLC and AVG CloudCare take care of threats, so we don't have to worry about them taking down any computers," he said.

The Situation:

Roman Weninger is the owner of 5 Corners Dodge Chrysler Jeep in Cedarburg, WI. Like many small businesses owners, he trusts his computer network to an IT consulting company.

LLC Corporation protects their 24 computer network and handles IT matters so Weninger doesn't have to. However, that was not always the case.

Lon Carriveau, owner of LLC Corporation, explained the situation he found when he was called out to the dealership for the first time to take over the computer network like this: "They were using another antivirus solution, and it was a train wreck, of course. Content filtering at this location was critical, so we moved them to a filtering appliance with forced antivirus."

"After a while, I realized it wasn't catching everything. We were still having problems where we had to redo computers just to get rid of viruses", Carriveau continued.

For Weninger, infected computers was more than just a hassle – each time a corrupted computer had to be swept clean, it cost money.

Both Carriveau and Weninger were eager to find a better content filtering and antivirus solution.

The Opportunity

"Recently, we were presented with AVG CloudCare Limited Release. It looked like a better approach for 5 Corners Dodge Chrysler Jeep because AVG is such a great antivirus product – plus AVG Cloudcare came with a flexible content filtering feature. We made the switch to AVG CloudCare as soon as we could," said Carriveau.

The Experience

“Let's get this installed on everything!”

Carriveau knew he made the right decision for 5 Corners Dodge Chrysler Jeep right away. During the AVG CloudCare initial scan, it found "quite a number of viruses that had been missed by the previous antivirus solution."

Weninger was immediately impressed by the AVG CloudCare content filtering feature. He recalled, "I didn't think we needed content filtering before, even when we were using a reputable solution. Looking back, the reports were hard to understand, it was too granular and hard to manage. I just didn't understand how it was helping us."

Carriveau put him on a 30 day free trial with the AVG CloudCare content filter. Before the trial was up, Weninger called Carriveau and said, "Oh my gosh, let's get this installed on everything!"

Carriveau adds that it was the easy-to-understand reporting that did the trick.

Weninger adds, "We also get reports from LLC on what has been quarantined, and they just take care of these things without us ever even knowing. There are other times when there are issues with SPAM and all that other nonsense where LLC has to go into a computer and tell AVG to remove it."

“As a business owner, I really appreciate that LLC and AVG CloudCare take care of threats, so we don't have to worry about them taking down any computers.”

About AVG CloudCare

AVG CloudCare is the free, cloud-based administration platform with "pay-as-you-go" services that simplifies the management of small business IT.

It delivers partners the opportunity to grow a managed security services business from a free platform that delivers many of the key functions of expensive enterprise IT management tools.
