MPPE Systems

99.9999% removal of hydrocarbons
MPPE Benefits

1 Very High Separation Performance
   Reduction factor 1,000,000 times = 99.9999% removal if required

2 Cost Competitive
   Cost competitiveness proven compared with air stripping and activated carbon, steam stripping and biotreatment systems

3 Low Energy Consumption
   • Low energy input to release hydrocarbons from MPPE particles (in situ regeneration)
   • Energy consumption up to 50 times lower than steam stripping

4 Robust, No Fouling
   • Anaerobic operation at ambient temperature. No interference from dissolved iron, heavy metals, surfactants, salt and polar compounds, and no scaling
   • No biological fouling because of periodic in situ regeneration by steam

5 Reliable and Easy Operation
   • Fully automated
   • Remote control using laptop and mobile telephone

6 Flexible Operation
   Once installed, the unit can treat higher and lower flows and concentrations. For example, if the concentration is 50% higher, effluent requirements can still be maintained with only a 10% lower flow. At lower feed concentrations, higher flows can be treated while still meeting the effluent demand

7 Compact Equipment
   Compared to existing technologies, the unit is compact with a small footprint

8 Ideal for Upstream Process Integration
   Because it is compact, robust, reliable, fully-automated, remote controlled, easy-to-operate and flexible, it is ideal for process integrated applications

9 Performance Guarantee during Operational Life
   The material performance is guaranteed during the operational life of the unit, regardless of how many times the MPPE material is changed.

10 Environmental Benefits
   • Practically pure, separated hydrocarbons for use/reuse
   • Low waste of polymer
     - Long lifetime
     - Reuse of spent material
   • Low energy consumption
   • Low noise
   • No addition of chemicals
   • No emission to air
   • No sludge formation
   • No (chemical) iron hydroxide waste
MPPE Systems

The Macro Porous Polymer Extraction (MPPE) system is a highly-effective, fully-automated, remote-controlled and guaranteed technology for removing hydrocarbons from water by means of extraction in a Macro Porous Polymer (MPP) bed.

MPPE systems are used for:
- Process water
- Offshore produced water
- Groundwater remediation
- Wastewater

MPPE systems remove dissolved and dispersed hydrocarbons with efficiencies 99.9999%, down to below ppb level, or as specified. This applies to different types of hydrocarbons, including:
- Aliphatic
- Aromatic
- Polyaromatic
- Halogenated, such as chlorinated, bromated

The MPPE Process Description

In the MPPE process, hydrocarbon-contaminated water is passed through a column packed with MPPE particles. The particles are porous polymer beads, which contain a specific extraction liquid. The immobilized extraction liquid removes the hydrocarbons from the water. Only the hydrocarbons, which have a high affinity for the extraction liquid, are removed. The purified water can either be reused or discharged. Periodical in situ regeneration of the extraction liquid is accomplished by stripping the hydrocarbons with low-pressure steam. The stripped hydrocarbons are condensed and then separated from the water phase by gravity. The almost 100% pure hydrocarbon phase is recovered, removed from the system and ready for use/reuse or disposal. The condensed aqueous phase is recycled within the system. The application of two columns allow continuous operation with simultaneous extraction and regeneration. A typical cycle is one hour of extraction and one hour of regeneration.
Industrial Process & Wastewater

Process water streams are treated upstream and end of pipe for possible reuse of water in the production process, or for discharge to surface water or to site/community biological wastewater treatment.

**Typical challenges MPPE can meet:**
- High influent concentrations
- High reduction factors
- Varying concentrations and compositions
- Varying flows
- Varying/wide pH range
- Presence of salts, surfactants, heavy metals, alcohols, monomer residues, pre-polymers, etc.

**Extra benefits are:**
- Small footprint
- Upstream integrated operation with remote control
- Scope for adding other process and groundwater streams, for treatment in one unit
- Reduced sludge formation in biotreatment
- Modular setup for large flows (thousands of m³/hr)

**Industries**
- Natural gas production/treatment
  - Aromatics, polyaromatics, aliphatics (3000 ppm and above)
- LNG terminals/gas to liquid plants
  - Aromatics, polyaromatics, aliphatics
- Underground gas storage
  - THT (tetrahydrothiophene), aromatics
- Water, oil, gas/condensate produced onshore
  - Aromatics, polyaromatics, aliphatics
- Chemical, specialty chemical and pharmaceutical raw material producers
  - Broad range of aromatics, aliphatics and halogenated (chlorinated/bromated) hydrocarbons
- Chemicals/oil storage distribution industry
  - Tank cleaning process water
  - Aromatics, aliphatics and halogenated hydrocarbons
- Resin production
  - Solvents/aromatics removal from process streams containing monomer residues
- Electronics Industry
  - Solvents removal (toluene) e.g. television screen factories
- Rayon/viscose industry
  - Carbon disulphide (CS₂), aromatics, aliphatics
- Over 40 years accumulated experience

**Removal of total spectrum of non-polar and polar organics proven in practice:**
Non-polar toxic non-biodegradable compounds and polar biodegradable compounds are removed by MPPE in series with biotreatment.

Full turnkey contracting is possible, as is partnering with local biotreatment suppliers.
Offshore Produced Water

Regulations for offshore produced water are becoming more and more stringent. New technologies are required for this challenging segment in order to meet future emission standards that are being set by international organizations, for example OSPAR* for the Northeast Atlantic.

Robust and can withstand:
- Salt, methanol, glycols
- Corrosion inhibitors
- Scale inhibitors
- H2S scavengers
- Demulsifiers
- Defoamers
- Dissolved (heavy) metals

Environmental aspects:
- Separated hydrocarbons are recovered in practically pure form for use as a product
- No emissions to air and water and no sludge formation
- Small footprint

MPPE systems proven in removal of dissolved and dispersed:
- Aromatic hydrocarbons (BTEX)
- Polyaromatic hydrocarbons (PAHs)
- NPD (naphtalenes, phenanthrenes, dibenzothiophenes)
- Aliphatics
- Hydrophobic components in oil field chemicals (e.g. inhibitors)

Evidence of success:
- Verified by Orkney Water Technology Center on water produced with oil and gas
- MPPE selected as best option from among 55 technologies (Government and Oil & Gas Industry Study)
- MPPE listed by OSPAR* as Best Available Technology (BAT)
- Experiences published in SPE Conference (TOTAL & Akzo Nobel) and Offshore Technology Conference (Shell/Exxon & Akzo Nobel)
- Commercial units running at TOTAL, NAM (Shell/Exxon), Statoil, and Hydro/Shell with over 25 years accumulated experience.

*OSPAR: Oslo Paris Convention for the Protection of the Marine Environment of the Northeast Atlantic
Groundwater

Aromatic, polyaromatic and halogenated hydrocarbons in groundwater can be found in lower concentrations dissolved in water diffused over the area or concentrated as DNAPLs (dense non-aqueous-phase liquids) or LNAPLs (light non-aqueous-phase liquids) creating an enduring source of contaminant supply to the water phase.

MPPE benefits for meeting challenges in groundwater applications are:
- Ideal for handling a broad range of compositions
- Able to cope with unexpected higher influent compositions at no additional costs
- No iron removal necessary (anaerobic process)
- Robust, can withstand salts, humic acids, surfactants, heavy metals, dissolved/suspended solids, high/low pH, etc.
- No sludge formation (as with iron removal and biotreatment)
- Scope for combination with other ground and process water streams in one unit

DNAPL and LNAPL removal by solvent or surfactant enhanced aquifer remediation (SEAR)
- Surfactant or alcohol injection enhances the dissolution of chlorinated hydrocarbons, PAHs, DNAPLs and LNAPLs in water from a few ppm to 10,000 - 50,000 ppm
- Organics recovered in two weeks equaled eight years of normal pump and treat
- MPPE proven as the ideal separation technology for these extremely high concentrations in surfactant/alcohol water mixtures
- Surfactant/solvent consumption savings as MPPE enables recirculation and recovery

How to start...

In practice, local situations, water compositions and effluent requirements are always specific, as is the technology to be chosen.

Preliminary cost estimate within one week
A preliminary cost estimate can be made based on
- influent specification
- effluent requirements
- flow rate
- non/availability of steam

Laboratory test
If economically attractive, the usefulness of the various types of laboratory tests compared with an immediate field test can be jointly evaluated.

Onsite field demonstration
An onsite field demonstration on customer premises can be arranged upon request for either offshore or onshore.

Lease/rent or buy
Options for lease or buy can be evaluated. Various mobile units are available for immediate leasing for periods ranging from weeks to years.

Turnkey delivery of integrated units
The investment cost is based on turnkey delivery including startup and, if applicable, including other technologies to be combined with the unit, such as:
- Pretreatment/pre-filter unit
- After-treatment/polishing, such as:
  - Biotreatment
  - Activated carbon
  - Air stripping

Ongoing Performance Guarantee and Service
A clear annual operating expenditure overview will be given for the MPPE technology, including an ongoing performance guarantee and service. This is valid for the total operational life of the unit and independent of the frequency of MPPE material exchange.

Mobile unit/operating characteristics:
- Self-contained, including a steam generator
- Can be installed and started up in one day
- Designed for onshore and offshore with all necessary HSE provisions
- Remote control by means of a mobile telephone connection or direct line
- Built in a container for operations in remote areas
- Turndown ratio to <10% of design capacity
- Operational support by remote control and onsite possible
- Onsite training and education of local personnel
- Operation by Whittier Filtration MPP Systems possible
Veolia Water Solutions & Technologies is committed to delivering sustainable solutions and resource recovery based on three key principles:

**Service** is what we provide our customers. We offer customer care at its best, not only through operation and maintenance contracts and asset management, but also aftermarket field services and Hydrex™ chemicals.

**Value** is what we create for our customers. We seek opportunities for recycle and reuse of resources, product recovery and energy production as part of our water treatment processes. For each project, we look for ways to add value for our customers.

**Responsibility** is the cornerstone of all our business activities. As part of Veolia Environnement, the world’s largest environmental company, we understand the importance of our social responsibility to protect the resources of our planet for future generations. We utilize tools such as Carbon Footprint evaluation and Water Impact Index to help our customers achieve their corporate sustainability goals.
